Multiple choices 2/60

(Choose 1 answer)

Which is NOT the good way to identify use case?

- A. Identify the actors first, then lay out the business processes being supported by the system, and define the use cases for activities where actors and systems interact.
- B. Create a specific scenario to illustrate each business process, then generalize the scenarios into use cases and identify the actors involved in each one.
- C. Using a business process description, ask, "What tasks must the system perform to complete this process or convert the inputs into outputs?" Those tasks might be use cases.
- D. Identify the external events to which the system must respond, then relate these events to participating actors and specific use cases.
- E. Use a CRUD (Create, Read, Update, Delete) analysis to identify data entities that require use cases to create, read, update, delete, or otherwise manipulate them.
- F. Based on your wants.

(Choose 1 answer)

The following statement is true or false? "We can measure business objective of a software project before project success metrics".

- A. True
- B. False

ices

Multiple choices 4/60

(Choose 1
answer)

The next statement is true or false? In general, Requirements Development tools are mature as Requirement Management tools, and their overall impact on projects is typically greater than that of Requirements Management tools.

- A. true
- B. false

Multiple choices 5/60

(Choose 1 answer)

Which is the CORRECT statements that describe about business requirements section in the template of Vision and scope document?

- A. The business requirements summarize the rationale and context for the new product or for changes to be made to an existing one. Describe the history or situation that led to the decision to build this product.
- B. The business requirements describe the primary benefits that the new system will provide to its sponsors, buyers, and users.
- C. The business requirements describe the business opportunity that exists and the market in which the product will be competing.
- D. The business requirements summarize the important business benefits the product will provide in a quantitative and measurable way.

Multiple choices 6/60

(Choose 1 answer)

Which is the most appropriate way when you want to resolve the disagreement requirement between Users and user managers?

- A. Product owner or product champion for the user class decides
- B. Customers get preference, but in alignment with business objectives
- C. Marketing gets preference
- D. Business objectives dictate direction

Multiple choices 7/60

(Choose 1 answer)

Which statement CORRECTLY describes the term user story?

- A. A description of a set of logically related possible interactions between an actor and a system that results in an outcome that provides value to the actor. Can encompass multiple scenarios.
- B. A format to capture user requirements on agile projects in the form of one or two sentences that articulate a user need or describe a unit of desired functionality, as well as stating the benefit of the functionality to the user.
- C. A customer who will interact with a system either directly or indirectly
- D. A statement that describes the strategic concept or the ultimate purpose and form of a new system.

Multiple choices 8/60

(Choose 1 answer)

The next statement is true or false? You always need assume that Suppliers in Outsourced Projects will interpret ambiguous and incomplete requirements the same way that you do.

A. True

B. False

Multiple choices 9/60

(Choose 1 answer)

Which activity is NOT belong to project plans process?

- A. Use requirements to size the project or process iteration ✓
- B. Base estimates on product size ✓
- C. Update plans as requirements change ✓
- D. Use requirement priorities to drive process iteration ✓
- E. Have developers review requirements

Multiple choices 10/60

(Choose 1 answer)

Which is the benefit of requirements reuse based on user's perspective?

- A. faster delivery
- B. lower development costs
- C. higher team productivity
- D. fewer defects
- E. Reduced rework
- F. improve functional consistency across related among a set of business applications

Multiple choices 11/60

(Choose 1 answer)

Which quality attribute is the most important in the managing grade of student system?

- A. Safety
- B. Security
- C. Performance
- D. Usability
- E. Portability

Multiple choices 1/260

(Choose 1 answer)

Which of the following option is the most appropriate to fill in the blank of the next statement?
_____ shows all of the systems related to the system of interest that interact with one another and the nature of those interactions.

- A. A context diagram
- B. A feature tree
- C. A sequence diagram
- D. An ecosystem map

Which is the CORRECT statements that describe about Ecosystem map?

- A. Ecosystem map visually illustrates the boundary and connections between the system you're developing and everything else in the universe.
- B. Ecosystem map description establishes the boundary and connections between the system you're developing and everything else in the universe.
- C. Ecosystem map shows all of the systems related to the system of interest that interact with one another and the nature of those interactions

Multiple choices 3/60

_____ is a visual depiction of the product's features organized in logical groups, hierarchically subdividing each feature into further levels of detail

- A. A Context diagram
- B. A feature tree
- C. A Sequence Diagram
- D. A Ecosystem map

Which technique is should not be used for the Embedded software project when you do requirements elicitation?

- A. Interviews
- B. Workshops
- C. Observations
- D. System interface analysis

The following terms can be used exchangeable. Which is the industry-standard term?

- A. business requirements document (BRD)
- B. functional specification
- C. product specification
- D. system specification
- E. requirements document
- F. software requirements specification

The following statement is true or false? "Project scope is more dynamic than product vision".

A. True

B. False

Which is the generic template for a requirement written from the user perspective?

A. [optional precondition] [optional trigger event] the system shall [expected system response]

B. The [user class or actor name] shall be able to [do something] [to some object] [qualifying conditions, response time, or quality statement].

Requirements are missed during elicitation that does not relate the software projects shouldn't be finished on time.

- A. True
- B. False**

Which is NOT a good reason to set a use case at high priority to implement?

- A. It describes part of a core business process that the system enables.
- B. Many users will use it frequently.
- C. A favored user class requested it.
- D. It's required for regulatory compliance.
- E. Other system functions depend on its presence.
- F. That use case won't be implemented for months.

When to use notation TBD (to be determined) in software requirements specification?

- A. When you dealing with incompleteness requirements
- B. When you labeling requirements
- C. When you numbering requirements
- D. When you organizing requirements

Constraint is a restriction that is imposed on the choices available to the developer for the design and construction of a product.

- A. Nonfunctional requirement
- B. Constraint**
- C. Feature
- D. Quality attribute
- E. System requirement

visually illustrates this boundary. It identifies external entities (also called terminators) outside the system that interface to it in some way, as well as data, control, and material flows between the terminators and the system

- A. Context diagram
- B. Class Diagram
- C. Sequence Diagram
- D. Flow diagram

The following skills are important for business analysts, EXCEPT:

- A. Facilitation skills
- B. Coding and technical skills
- C. Observational skills
- D. Organizational skills
- E. Leadership skills

Which of the following is the CORRECT definition of the term Feature?

- A. One or more logically related system capabilities that provide value to a user and are described by a set of functional requirements.
- B. A description of a behavior that a system will exhibit under specific conditions.
- C. A description of a property or characteristic that a system must exhibit or a constraint that it must respect.
- D. A kind of nonfunctional requirement that describes a service or performance characteristic of a product.

Which is the most appropriate way when you want to resolve the disagreement requirement between Users and user managers?

- A. Product owner or product champion for the user class decides
- B. Customers get preference, but in alignment with business objectives
- C. Marketing gets preference
- D. Business objectives dictate direction

Which is NOT a basic skill of a Business Analyst?

- A. Listening skills
- B. Interviewing and questioning skills
- C. Analytical skills
- D. Communication skills
- E. Modeling skills**
- F. Document requirements

The following are some of the typical activities which BA has to do, EXCEPT:

- A. Define business requirements
- B. Plan the requirements approach
- C. Identify project stakeholders and user classes
- D. Plan for development phase**
- E. Lead requirements validation

Choose the true sentence about links in the requirements chain:

- A. Customer needs and Requirements are related to each other
- B. Customer needs and Requirements are absolutely identical

Which is the correct definition of the term business rule based on the information system perspective?

- A. A business rule is guidance that there is an obligation concerning conduct, action, practice, or procedure within a particular activity or sphere.
- B. A business rule is a statement that defines or constrains some aspect of the business. It is intended to assert business structure or to control or influence the behavior of the business.

What is not included in Requirement Statuses?

- A. Proposed, In Progress, Drafted

- C. A package solution will be used.
- D. Accurate estimates are needed.**

Which of the following is the CORRECT definition of the term Functional Requirement?

- A. One or more logically related system capabilities that provide value to a user and are described by a set of functional requirements.
- B. A description of a behavior that a system will exhibit under specific conditions.**
- C. A description of a property or characteristic that a system must exhibit or a constraint that it must respect.
- D. A kind of nonfunctional requirement that describes a service or performance characteristic of a product.

Which analysis model you should use when the customers present their requirements using Noun?

- A. Entities or their attributes (ERD)
- B. Relationships (ERD)
- C. Use cases (use case diagram)
- D. Process steps (swimlane diagram)

Impact analysis procedure and template are not necessary for change impact analysis

A. False

B. True

Who is NOT the owner of the vision and scope document?

- A. Project's executive sponsor
- B. Funding authority
- C. Programmer

The following statements are true or false? Anywhere there are functions, there is data. Software functionality is specified to create, modify, display, delete, process, and use data.

A. True

B. False

What is true about Sources of trace link information

- A. Link source object type is System requirement, then Link target object type is Functional requirement
- B. Link source object type is user requirement, then Link target object type is Functional requirement
- C. Link source object type is Design Element, then Link target object type is Code
- D. All other answers are true

What is NOT true about Requirements traceability matrix?

- A. Requirements traceability matrix Represents the links between requirements and other system elements
- B. Requirements traceability matrix does not relates to the links between requirements and other system elements

Which is a good place to start specifying data requirements in the new software system you want to develop?

- A. with the input and output flows on the system's context diagram
- B. with the input and output flows on the class diagram
- C. with the input and output flows on the state diagram
- D. with the input and output flows on the sequence diagram
- E. with the input and output flows on the use case diagram
- F. with the input and output flows on the data diagram

Major requirements management activities include:

- 1. Version Control
 - 2. Change Control
 - 3. Test Trackings
 - 4. Requirement Status Trackings
 - 5. Requirement Tracking
- A. 1, 2, 4, 5
B. 2, 3, 4, 5
C. 1, 3, 4, 5
D. 1, 2, 3, 4

Which is the most appropriate way when you want to resolve the disagreement requirement between Development and marketing?

- A. Product owner or product champion for the user class decides
- B. Customers get preference**, but in alignment with business objectives
- C. Marketing gets preference
- D. Business objectives dictate direction

Which is NOT a basic task of a Business Analyst?

- A. Define business requirements
- B. Plan the requirements approach
- C. Identify project stakeholders and user classes
- D. Elicit requirements
- E. Document requirements
- F. Thinking on your feet

Which is NOT an example belong to the Action Enablers, a type of business rule?

- A. If the chemical stockroom has containers of a requested chemical in stock, then offer existing containers to the requester.
- B. On the last day of a calendar quarter, generate the mandated ABC and XYZ reports on chemical handling and disposal for that quarter.
- C. If the expiration date for a chemical container has been reached, then notify the person who currently possesses that container.

Every order has a shipping charge.

is a goal or task that specific classes of users must be able to perform with a system, or a desired product attribute.

- A. User requirement
- B. Constraint
- C. Business rule
- D. Quality attribute
- E. System requirement

Requirements are missed during elicitation that does not relate the software projects shouldn't be finished on time.

A. True

B. False

Which of the following correctly describe good practices about reaching agreement on requirements when testers and management involve?

- A. Testers agree that the requirements are verifiable.
- B. Management agrees that the requirements will not need to achieve their business objectives.
- C. Both others are true

The following are some of the typical activities which BA has to do, EXCEPT:

- A. Define business requirements
- B. Plan the requirements approach
- C. Identify project stakeholders and user classes
- D. Plan for development phase**
- E. Lead requirements validation

_____ is a high-level business objective of the organization that builds a product or of a customer who procures it.

- A. **Business requirement**
- B. Business rule
- C. Constraint
- D. Functional requirement
- E. System requirement

Without customer contact the expectation gap ___ during software development time

- A. decreases
- B. increases**
- C. Doesn't change

Which is NOT the good way to identify use case?

- A. Identify the actors first, then lay out the business processes being supported by the system, and define the use cases for activities where actors and systems interact.
- B. Create a specific scenario to illustrate each business process, then generalize the scenarios into use cases and identify the actors involved in each one.
- C. Using a business process description, ask, "What tasks must the system perform to complete this process or convert the inputs into outputs?" Those tasks might be use cases.
- D. Identify the external events to which the system must respond, then relate these events to participating actors and specific use cases.
- E. Use a CRUD (Create, Read, Update, Delete) analysis to identify data entities that require use cases to create, read, update, delete, or otherwise manipulate them.

F. Based on your wants.

Software requirements specification template is belong to _____

- A. Requirements Development Process Assets
- B. Requirements Management Process Assets

Which statement CORRECTLY describes the term use case?

- A. A description of a set of logically related possible interactions between an actor and a system that results in an outcome that provides value to the actor. Can encompass multiple scenarios.
- B. A format to capture user requirements on agile projects in the form of one or two sentences that articulate a user need or describe a unit of desired functionality, as well as stating the benefit of the functionality to the user.
- C. A customer who will interact with a system either directly or indirectly
- D. A statement that describes the strategic concept or the ultimate purpose and form of a new system.

Which statements are true?

- A. Identify user classes of the new software system will be developing should start by asking the project sponsor who he expects to use the system. Then brainstorm as many user classes as you can think of.
- B. Identify user classes of the new software system will be developing should start by brainstorming as many user classes as you can think of. Then asking the project sponsor who he expects to use the system.

What is NOT true about motivations for tracing requirements?

- A. Finding missing requirements, Finding unnecessary requirements, Certification and compliance, Change impact analysis
- B. Maintenance , Project tracking, Reengineering, Reuse, Testing
- C. Managing Project

Which of the following is the CORRECT definition of the term Constraint?

- A. A high-level business objective of the organization that builds a product or of a customer who procures it.
- B. A policy, guideline, standard, or regulation that defines or constrains some aspect of the business. Not a software requirement in itself, but the origin of several types of software requirements.
- C. A restriction that is imposed on the choices available to the developer for the design and construction of a product.
- D. A description of a connection between a software system and a user, another software system, or a hardware device.

Which analysis model you should use when the customers present their requirements using Conditional?

- A. Decisions (decision tree, decision table, oractivity diagram)
- B. Use cases (use case diagram)
- C. Entities or their attributes (ERD)
- D. Objects with states (STD)

Which is NOT an example belong to the constraint, a type of business rule?

- A. Organizational policies
- B. Government regulations
- C. Industry standards
- D. Books taller than 16 inches are shelved in the library's Oversize section.

On projects using agile development methods, the traditional project role Business Analyst will likely be a

- A. Product owner
- B. Scrum master
- C. The team
- D. The tester

Conduct focus groups and Identify user requirements activities should be done in _____ stage

- A. Elicitation
- B. Analysis
- C. Specification
- D. Validation

Which is the CORRECT statements that describe about business opportunities section in the template of Vision and scope document?

- A. The business opportunities summarize the rationale and context for the new product or for changes to be made to an existing one. Describe the history or situation that led to the decision to build this product.
- B. The business opportunities describe the primary benefits that the new system will provide to its sponsors, buyers, and users.
- C. The **business opportunities** describe the business opportunity that exists and the market in which the product will be competing.
- D. The business opportunities summarize the important business benefits the product will provide in a quantitative and measurable way.

Define vision and scope and Select product champions activities should be done in _____ stage

A. Elicitation

B. Analysis

C. Specification

D. Validation

Which template does fit with the example requirement written based on the system's perspective? "If the requested chemical is found in the chemical stockroom, the system shall display a list of all containers of the chemical that are currently in the stockroom."

A. [optional precondition] [optional trigger event] the system shall [expected system response]

B. The [user class or actor name] shall be able to [do something] [to some object] [qualifying conditions, response time, or quality statement].

Which is NOT a signal that indicate you've completed requirements elicitation?

- A. The users can't think of any more use cases or user stories. Users tend to identify user requirements in sequence of decreasing importance.
- B. Users repeat issues they already covered in previous discussions.
- C. Suggested new features, user requirements, or functional requirements are all deemed to be out of scope.
- D. Proposed new requirements are all low priority.
- E. Proposed new requirements are all high priority.

Who is NOT the owner of the vision and scope document?

- A. Project's executive sponsor
- B. Funding authority
- C. Programmer

Model the requirements and allocate requirements to subsystems activities should be done in _____ stage

- A. Elicitation
- B. Analysis**
- C. Specification
- D. Validation

Which is the most appropriate representation techniques when you are trying to show, analyze, or discover
User task descriptions?

- A. User stories, scenarios, and use case specifications
- B. Detailed screen layouts and high-fidelity prototypes
- C. The entity-relationship diagram
- D. State-transition diagrams and state tables

Which of the following correctly describe good practices about reaching agreement on requirements when testers and management involve?

- A. Testers agree that the requirements are verifiable.
- B. Management agrees that the requirements will not need to achieve their business objectives.
- C. Both others are true

Which is NOT a basic element of Plan when you do requirements elicitation on your project?

- A. Elicitation objectives
- B. Elicitation strategy and planned techniques
- C. Schedule and resource estimates
- D. Expected products of elicitation efforts
- E. Elicitation risks

F. Keep everyone engaged

Which is NOT the main audience of the software requirements specification document?

- A. Customers, the marketing department, and sales staff need to know what product they can expect to be delivered.
- B. Project managers base their estimates of schedule, effort, and resources on the requirements.
- C. Software development teams need to know what to build.
- D. Testers use it to develop requirements-based tests, test plans, and test procedures.
- E. Maintenance and support staff use it to understand what each part of the product is supposed to do.
- F. The competitor, who want to steal the data of the software system

_____ is a set of requirements that has been reviewed and agreed upon and serves as the basis for further development

- A. A requirements baseline
- B. A requirements document
- C. A system requirements baseline
- D. A system requirements document

What is NOT true about Fundamentals of software process improvement

- A. Process improvement should be evolutionary and continuous
- B. People and organizations change only when they have an incentive to do so
- C. Process changes should be goal-oriented
- D. Treat your improvement activities as mini-projects
- E. Software process improvement is not necessary because it makes software development cost more

Which of the following is the CORRECT definition of the term Quality attribute?

- A. One or more logically related system capabilities that provide value to a user and are described by a set of functional requirements.
- B. A description of a behavior that a system will exhibit under specific conditions.
- C. A description of a property or characteristic that a system must exhibit or a constraint that it must respect.
- D. A kind of nonfunctional requirement that describes a service or performance characteristic of a product.

Requirements bill of responsibilities for software customers are all the following, EXCEPT:

- A. Educate BAs and developers about business
- B. **Describe** characteristics that will make the product easy to use.
- C. Make timely decisions about requirements when asked.
- D. Respect a developer's assessment of the cost and feasibility of requirements

is one or more logically related system capabilities that provide value to a user and are described by a set of functional requirements.

- A. External interface requirement
- B. Feature**
- C. Nonfunctional requirement
- D. Quality attribute
- E. System requirement

identifies external events that could trigger behavior in the system. It depicts the scope boundary for the system by naming possible business events triggered by users, time-triggered (temporal) events, or signal events received from external components, such as hardware devices

- A. An event list
- B. A feature tree
- C. A Sequence Diagram
- D. A Ecosystem map

Customers have the responsibility to

- 1. Dedicate the time that it takes to provide and clarify requirements.
- 2. Be specific and precise when providing input about requirements.
- 3. Make requirements and make prototypes.
- 4. Establish acceptance criteria.

A. 1, 2, 3

B. 1, 2, 4

C. 1, 3, 4

D. 2, 3, 4

What is not included in Requirement Effort?

- A. Planning requirements-related activities for the project
- B. Holding workshops and interviews, analyzing documents, and performing other elicitation activities
- C. Writing requirements specifications, creating analysis models, and prioritizing requirements
- D. Creating and evaluating prototypes intended to assist with requirements development
- E. Reviewing requirements and performing other validation activities

F. Writing the software sources

is a goal or task that specific classes of users must be able to perform with a system, or a desired product attribute.

- A. User requirement
- B. Constraint
- C. Business rule
- D. Quality attribute
- E. System requirement
